

MANUFACTURER OF THE FINEST QUALITY PLASTERWORK

We specialise in the manufacture of plasterwork matching to existing, restoration and making to specification.

Established in 1985, we have remained, by choice, a relatively small company which enables us to continue to provide both excellence in workmanship and high-quality plasterwork at a price that is affordable.

Specialist Plastercraft Ltd is based in Hertfordshire therefore we primarily operate in London and the Home Counties, however we have carried out a sizeable number of assignments nationwide.

Our impressive reputation is warranted through consistently providing high standards in all of our projects, from small 'one off' tasks to large-scale projects for prestige clients.

Internal fibrous plasterwork forms the base of our business but we undertake a significant number of contracts using Glass Reinforced Concrete and Glass Reinforced Plastic for external plastering too.

CORNICE

GLASS REINFORCED CEMENT AND GLASS REINFORCED PLASTIC

GRC is a cement-based product that is reinforced with glass strands. It is tough and durable and so perfectly suited external plasterwork. It provides an excellent cost alternative to natural stone, and still has excellent capabilities in terms of reproducing fine detail.

GRP is a similar product, with several of the same characteristics. It is a plastic based product, again reinforced with glass. Being significantly lighter than GRC,

it is much more suited to spanning greater distances. It can also be finished in colour, imitating lead work or even polished metallic.

For further information on our GRC and GRP products please get in touch.
